

IT Business Management

Practical Session- week 2 (10th February – 17th)

1. This week you will work individually and in your teams.
2. Each team will need to share a Trello board for web server and software engineering and testing. As a team you can decide who will share what board.
3. You must create a Gantt chart for your project due for Arnold Hensman and Robert Smith. Get into your teams and create a Gantt 1 for your Software engineering project (design) and your web server project(development). Outline the weekly plan for each assignment from today until the dates they are due.
4. Save the file and upload it to your software testing Trello board. Take a screenshot of each stage in the Gantt chart i.e., design, development and the generated bar chart and paste into word and save as a PDF. Upload this doc to Brightspace. (Each team member must do this)
