

Software Engineering and Testing

Lab 8: (Read all instructions carefully)

Upload 1 PHP file

Part (a) Demo CA3 – Design and Draft Implementation

Part (b) Sprint *(Objectives of Lab)*

Unit Test:

Unit tests are used by developers to verify the functionality of various components in their code.

This ensures that all variables, functions, and objects work as expected.

TASK: Create 1 Unit Test File to fully test an

Encapsulated Class

*E.g. If you have a **Product.php** class*

*Create a **UnitTestProduct.php** class with appropriate instantiation of object and data assigned*

Upload your test PHP class file.
