Walkthrough

Social Media Platform Use Case Diagram

Use Case Specifications

Use Case 1: User Registration

Actors: New User **Description:** Allows a new user to create an account. **Preconditions:** The user has access to the sign-up page. **Flow:**

- 1. User enters username, email, and password.
- 2. System validates inputs.
- 3. System stores user information securely.

Use Case 2: Post Creation

Actors: Registered User **Description:** Allows users to create a post with text, images, or videos. **Preconditions:** User is logged in. **Flow:**

- 1. User clicks the "Create Post" button.
- 2. User enters post content and uploads optional media.
- 3. System validates input and uploads content.
- 4. System stores the post in the database.
- 5. The post appears in the user's feed.

(Additional use cases will be added, covering liking, commenting, following, and content reporting.)

Webpage Prototypes

- Version 1.0 of the project will be updated to include static web pages representing each functional requirement.
- These pages will be demonstrated to the lecturer for feedback.
- The pages do not need full functionality at this stage but should represent the final design and structure.
